PROFESSIONAL SUMMARY

Full-Stack Developer specializing in Python, AI-powered systems, and iOS application development. Experienced in building scalable backend architectures, ATS optimization engines, and job automation platforms. Strong expertise in FastAPI, Django, REST APIs, and Swift-based mobile development. Proven ability to deliver high-performance systems with measurable impact, improved efficiency, and reduced operational costs.

TECHNICAL SKILLS

Backend & AI:

Python, FastAPI, Django, Flask, REST APIs, SQLAlchemy, Pandas, NumPy, AI Integration, Prompt Engineering

Mobile Development:

Swift, SwiftUI, UIKit, Combine, Core Data, MVC, MVVM, iOS SDK

Frontend Development:

HTML, CSS, JavaScript (ES6+), React.js, TailwindCSS

Databases & Tools:

MySQL, PostgreSQL, SQLite, Docker, Git, Linux, AWS

Core Concepts:

System Design, Data Structures & Algorithms, API Integration, OAuth

PROJECTS

ResumeAI – ATS Resume Scanner & Builder

Tech: Python, FastAPI, SQLite, NLP

- Developed a **Python-based ATS scoring engine (0–100)** evaluating resumes based on keyword matching, formatting, and content quality
- Built hybrid system combining **rule-based parsing and AI enhancements**, improving resume scores from ~70 to **90+**
- Implemented keyword extraction and job description matching, increasing ATS compatibility by **70%+**
- Engineered automated resume rewriting system using action verbs, quantified metrics, and structured formatting
- Reduced external AI API usage by **60%** through optimized backend logic
- Designed modular architecture supporting scalability and future ML integration

ResumeAI – Job Automation Platform

Tech: FastAPI, PostgreSQL, Celery, Redis

- Built scalable job automation system handling **end-to-end job search workflows**
- Integrated **multiple job APIs**, fetching **250+ job listings per query**
- Developed job-matching algorithm using **Pandas and NumPy**, improving match accuracy by **25%**
- Created Chrome extension automating **80% of job applications**

- Designed job ranking engine processing **1000 jobs per minute (95% accuracy)**
- Implemented asynchronous processing using Celery and Redis
- Improved system performance by **40%** through batching and rate-limiting strategies

AI Short Generator (2025 – Present)

GitHub: [[Project Link](#)]

Tech: JavaScript, OpenAI API, TailwindCSS

- Built AI-powered web app for generating short-form content
- Implemented prompt optimization and keyword recognition system
- Reduced content creation time by **60%**
- Designed responsive UI with optimized performance

Restaurant iOS Application (2024)

GitHub: [[Project Link](#)]

Tech: Swift, UIKit, Core Data

- Developed iOS application with real-time search, product listings, and media previews
- Implemented MVC and MVVM architecture
- Integrated REST APIs and local database storage
- Improved task completion rate from **65% to 90%**
- Optimized UI performance and user experience

FNOL Claims Processing & Routing Agent

Design: [[Project Link](#)]

Tech Stack: Python, PDFPlumber, Rule-Based Engine

- Built a lightweight autonomous system to process **FNOL** insurance documents
- Implemented document parsing pipeline supporting **TEXT and PDF inputs**
- Extracted key fields such as policy number, incident date, claim type, and estimated damage
- Developed rule-based engine to classify and route claims based on business logic

Personal Portfolio Website (2025)

GitHub: [[Project Link](#)]

Tech: HTML, CSS, JavaScript

- Built SEO-optimized portfolio website (**95+ Lighthouse score**)
- Improved recruiter engagement by **40%**
- Designed responsive and performance-optimized UI

EXPERIENCE

Self / Personal Projects — Full-Stack Developer (2024 – Present)

- Developed AI-driven resume optimization and job automation platforms
- Designed scalable backend systems handling high-volume API requests
- Built automation pipelines reducing manual job application effort
- Improved system efficiency and reduced operational costs through optimized logic

- Continuously enhanced features based on performance metrics and usability

EDUCATION

MVGR College of Engineering

B.Tech – Electrical & Electronics Engineering (2022)
